

			(-)	(-)
1	207		Mn	Mössbauer study of lithium iron phosphates doped by Mn and exposed to the charge process
2	208			"The remaining electricity" phenomenon. Experimental research with plate condenser
3.	207			Mössbauer study of iron reducing process in alkaline conditions
4	219			Photoreflectance from low-temperature gallium arsenide
5	202		c	Bacteriochlorophyll fluorescence of green sulphur bacteria of different pigmentation
6.	204			Single track Gray code investigation
7	212			The study of self-organization of nanoclusters of tin in the silicon matrix
8	204			The features of atom ejection from single crystal surfaces
9	209			Optical properties of metamaterials
